

Trimo Containerised Buildings

Trimo's Containerised accommodation and offices are excellent products and the result of many years of experience of supplying the commercial market that demands exacting standards of comfort, durability and ease of use. Considerable design effort over the years has ensured that the traditional problems often associated with living and working in containers has been eliminated.

Complete Containerised solutions

The first Trimo containerised building was a simple office. A programme of continual development has generated a product adaptable for many uses. Trimo has successfully designed, built and installed containerised building complete with kitchens and dinning rooms, virtual villages of accommodation, multi-storey offices complexes, showers and toilets, bakeries, schools and even exhibition spaces.

Containerised Buildings Benefits

- Flexibility of dimensions to meet you individual requirements,
- Non-flammable and environmentally friendly materials (panels have a mineral wool core),
- A range of colour options (RAL scale - the standard colour is RAL 9002),
- Quick delivery and installation,
- Free technical support,
- After sales support.

Flexible and Fast Installation

Trimo containerised buildings can be flat-packed to reduce transport cost and are easy to build and install. These 'plug and play' building require only plumbing and electrical connections to be established before they can be used.

Trimo containerised buildings are flexible enough to cope with the potential growth of any installation. Trimo has developed containerised buildings which are completely modular, and should the need arise others can be joined together to create larger open spaces, placed on top, or at the side. A system of interchangeable wall panels offers great flexibility in floor plans. A wide selection of additional elements are also available that enables the installation of containers to suit a particular environment.

Wide range of products

The Trimo range of containerised products includes the essential living components for personnel living and working in remote conditions or where the necessary infrastructure is lacking. These designs have been perfected over many years and include accommodation, offices, launderettes, ablutions, kitchens, recreational areas, briefing rooms and cinemas as well as shops, stores, etc.

Trimo designs and supplies a total package. Integrated walkways, corridors, staircases and secondary roofing are also available that will enhance and complete your facility. These system components are delivered fully pre-configured to reduce on-site construction time and minimise logistical complexity.
